RIGHT TREE / RIGHT PLACE

1. Choose A Location to Plant

Walk around the land and look for a sunny area that is big enough for a tree and not obstructed overhead.

A. Which spot did you choose? (describe where it is and what it looks like now).

Location: _____

What is there now?: _____

Any notes: _____

B. Is there enough space for your tree to grow? Look around and measure if you can. *The tree should ideally have at least an 8 ft x 8 ft area.*

Is there enough room vertically? _____

Side-to-side? _____

C. How much sun does your chosen spot get?

Look at the location throughout the day when you remember and fill out your sun chart below. Fill in one square for each time of the day (like in the example). Don't worry if it's not the exact time when you look at it, just do your best to look at your site throughout the day.

Track the ☀️	Example	7 am	9 am	11 am	1 pm	3 pm	5pm
Sunny ☀️☀️☀️							
Partial ☀️☁️							
No ☁️ (shady)
